

## Metabolyst C.A.R.E. Solution for Clinical Results Notification

### Clinical Results Routing, Processing and Notification

Getting Clinical Results to your physicians in a timely manner is one of the most important factors affecting quality of care. Your physicians need this information to make informed decisions regarding their patients.

We know delivering clinical results to your physicians is much more difficult than it sounds. Physician delivery preferences can vary by parameters such as day, time, location, or type of test result – making a theoretically simple task a very complicated matter.

This issue's difficulty becomes compounded when you begin to consider the array of different systems and departments involved. Radiology, Laboratory, Imaging, and PACs each contribute their own unique specifications and workflows that must be considered when attempting to overcome the hurdles associated with delivering clinical results in a timely manner.

Our C.A.R.E. System Clinical Results Notification provides a flexible, efficient and cost effective solution. It was designed to take all of the parameters and variables into account to automatically route results to each physician based on his or her preferences, enhancing physician satisfaction and loyalty, quality of care and reducing costs.
