

## Metabolyst C.A.R.E. Solution for Outpatient Clinical Services Access

### Med Order Pre-Processing, Identification and Workflow Management

Whether your organizations Outpatient Services focus on a specific area, or across multiple functions, there is a tendency for an interrupted schedule to swiftly domino into a full-fledged problem.

First case of day issues plague a lot of hospitals and outpatient surgery centers. If the patient record is missing vital information, you usually have to reschedule or wait, throwing the whole day into disarray, and usually results in your overworked staff having to work more overtime to compensate.

Often, procedures get rescheduled, this results is a perceived quality of care issue.

We can help you get back on track. Our C.A.R.E. Solution can greatly reduce the amount of missing patient information by automating the manual tasks in your scheduling routine. This results in more accurate information reaching the desired location with more reliability.

We can even implement a data check for days before the appointment is to take place, giving you ample time to correct any errors or retrieve any missing information before it becomes a real-time hindrance on your schedule.
